HELP US BE PREPARED IN IDENTIFYING POTENTIAL CASES OF EBOLA

1. Have you traveled outside of the US in the last 30 days?
2. If yes, did you travel to Guinea, Liberia, or Sierra Leone?
3. Have you been near anyone with a diagnosis or suspected diagnosis of Ebola?
4. Have you had a fever, headache, or other typical symptoms of Ebola (joint and muscle pain, weakness, diarrhea, vomiting, stomach pain, lack of appetite)?

- If patient has any symptoms listed above and answers yes to questions #2 OR #3, immediately isolate the patient in a private room and give him/her a mask to wear.
- Inform the patient that "We are committed to taking care of you and we are taking these precautions for your health and the health of others."

- Call Hospital Epidemiology immediately 24/7 for any suspected case of Ebola
  Phone = 919-966-1636
  Pager = 123-7427
- Infection Control and/or the Ebola Care Team will respond ASAP and lead the care of the isolated patient.
